

# OARRS Enhancements Release Notes

April 11, 2018

## 1. MME Changes

The CDC has updated its guidance to exclude buprenorphine from the narcotic mg equivalent (MME)/day calculation. To accommodate this change, OARRS will now calculate and display a patient's narcotic and buprenorphine equivalencies separately.

The reference language in the patient report has been updated to reflect the CDC's updated guidance.

In addition, this enhancement updates the Patient Report to include opioid and buprenorphine summary data as specified in the table below:

Summary	Opioids	Buprenorphine
Total Prescriptions	Current Qty	Current Qty
Total Prescribers	Current MME/Day	Current mg/Day
Total Pharmacies	30-Day Avg MME/Day	30-Day Avg mg/Day

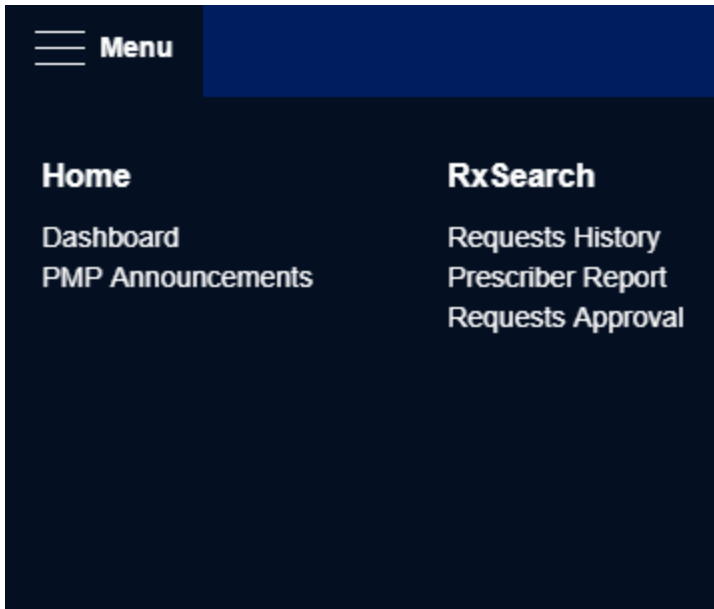

## 2. Enhanced Law Enforcement Request Approval Workflow

This enhancement allows any law enforcement supervisor to approve their delegates' requests, including requests for Patient Reports as well as prescriber and pharmacy reports. In addition, supervisors will receive email notification for pending requests. Once approved, the supervisor can download and view those requests.

To view and approve your delegates' requests:

1. Log into OARRS as a law enforcement supervisor
2. Click Menu > Requests Approval (located under RxSearch)

The list of your delegates' requests is displayed. *Note: Only requests from your delegates will be displayed – not the entire agency.*

RxSearch > Requests Approval
